Kushal Barikar - 2213661 - A

Experiment No:2

Design a responsive navigation bar that changes its appearance and behavior based on the user's scroll position. Implement animations, such as sliding or fading, as the user scrolls up or down the webpage.

Objective:

- ☐ To design a responsive navigation bar that reacts to user scrolling with animations.
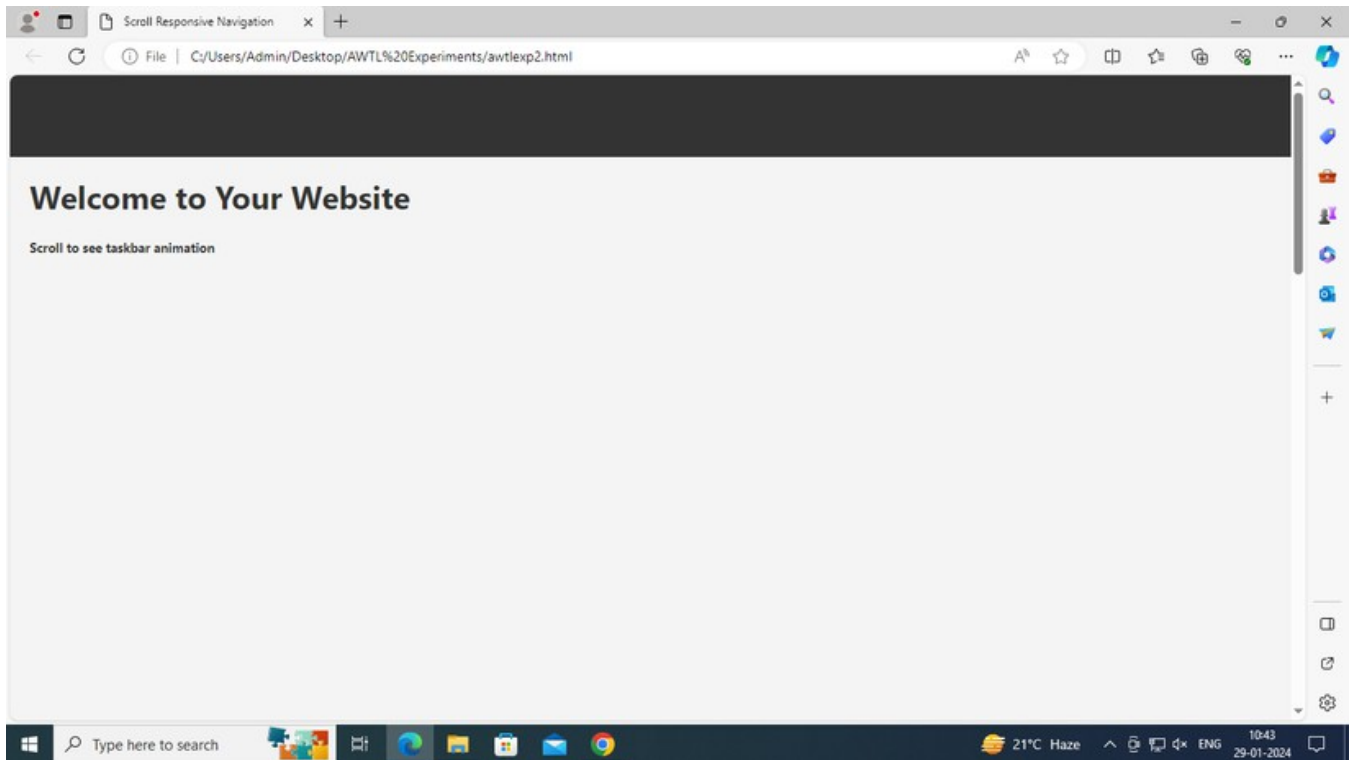

Theory:

Bootstrap
Navigation Bar
Media Query

Conclusion:

In conclusion, a responsive navigation bar that dynamically adjusts its appearance and behavior enhances the user experience by providing a seamless and engaging interaction. The incorporation of scroll-triggered animations, such as sliding or fading, adds a touch of sophistication, making the website more visually appealing and intuitive. This design approach not only improves navigation but also contributes to a modern and polished user interface.
